

Functionality of Ticketing Management System

The main features of the database package of the Ticketing Management System are as follows

- The system will keep user-level password-protected security, enabling the administrator to restrict menu access to various features and to disallow printing of reports by unauthorized persons.
- More than one user will be able to work on one database at a time.
- Centralization of database on one server.
- Complete integrity of database (No chance of data lost due to electric failure or fluctuation if data saved).
- Unlimited locations/terminals definition as per management requirement.
- Unlimited routes definition option as management needs.
- Management of timing schedule.
- Proper management & record keeping of Buses e.g. Bus Number, Category, Fare.
- Management & systematic control of Advance Ticketing.
- Management & systematic control of Telephonic Booking.
- Automation of Issuance and Printing of ticketing.
- Record keeping & handling of cancellation of tickets.
- Feature for duplicate printing of any ticket and proper record keeping of duplicate printed tickets.
- Facility for auto bus converter e.g. VIP Bus to Normal and Normal to VIP
- Facility to amend the schedule of any time and drop or add new time.
- Built feature to set fare rates for future and system will automatically charge on advance booking of those dates and implemented automatically from that date.
- Auto data backup feature to secure data.
- Auto setting feature for day and night shifts.
